DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

- 2. Claims 1-9 and 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 3. Regarding claim 1, the phrase "user may specify" renders the claim indefinite because it is unclear whether the limitations following the phrase "may" are part of the claimed invention.

Claims 2-9 and 11 are rejected by virtue of their dependence.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

10/577,098

Art Unit: 2882

5. Claims 1-4, 8, 10 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Ueki et al. (US Patent 6,377,656 B1).

With respect to claims 1, 10 and 11, Ueki teaches a method and an adjusting device for adjusting imaging parameters of an X-ray apparatus, comprising: a user interface (10 and 11) by means of which, with the aid of a preliminary image, a user specifies an image region of interest (ROI) and a visibility criterion desired for this image region; a data processing (109) device arranged to carry out the following steps: calculation of adjusted imaging parameters of the X-ray apparatus, by use of which the predetermined visibility criterion is achieved for the given image region (ROI); control of the X-ray apparatus on the basis of the calculated, adjusted imaging parameters (see abstract; Figs. 1, 3, 6, 7B, 9A and 9B; column 5, lines 36-55; column 7, lines 15-47; column 9, lines 30-35; column 10, lines 42-59).

With respect to claim 2, Ueki teaches that the data processing device (5) is arranged to determine, in a preliminary image, the current value of the visibility criterion for a predetermined image region (ROI) column 5, lines 36-55; column 7, lines 15-47; column 9, lines 30-35; column 10, lines 42-59).

With respect to claim 3, Ueki teaches that the imaging parameters influence the dose per exposure, the intensity and/or the quality of the X-ray radiation generated with the X-ray apparatus (column 5, lines 36-55; column 7, lines 15-47; column 9, lines 30-35; column 10, lines 42-59).

Art Unit: 2882

With respect to claim 4, Ueki teaches that the imaging parameters include the tube current, the tube voltage and the pulse length column 5, lines 36-55; column 7, lines 15-47; column 9, lines 30-35; column 10, lines 42-59).

With respect to claim 8, Ueki teaches a control module (7) for feedback control of imaging parameters of the X-ray apparatus during an X-ray image column 5, lines 36-55; column 7, lines 15-47; column 9, lines 30-35; column 10, lines 42-59).

Allowable Subject Matter

- 6. Claims 5-7 and 9 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
- 7. The following is a statement of reasons for the indication of allowable subject matter:

With respect to claim 5, prior art fails to teach or make obvious an adjusting device, wherein the visibility criterion is the contrast-to-noise ratio of the image region of interest as claimed in combination with all of the remaining limitations of the base claim and any intervening claims.

With respect to claim 6, prior art fails to teach or make obvious an adjusting device, wherein a preliminary image, on the basis of at least one pixel predefined via the user interface and a data processing device is arranged to segment an image region

Page 5

of interest as claimed in combination with all of the remaining limitations of the base claim and any intervening claims.

With respect to claim 7, prior art fails to teach or make obvious an adjusting device, wherein a data processing device is arranged to take account of the influence of image processing procedures, in particular noise filtration, when adjusted imaging parameters are calculated as claimed in combination with all of the remaining limitations of the base claim and any intervening claims.

With respect to claim 9, prior art fails to teach or make obvious an adjusting device comprising means for detecting changes in the imaging geometry and that a data processing device is arranged to adjust a calculated imaging parameters in the case of a change in the imaging geometry such that the predetermined visibility criterion is still achieved as claimed in combination with all of the remaining limitations of the base claim and any intervening claims.

Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Irakli Kiknadze whose telephone number is 571-272-2493. The examiner can normally be reached on 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ed Glick can be reached on 571-272-2490. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
